

BOOMERANG Ref. 138

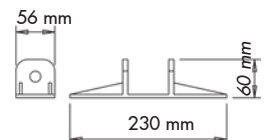

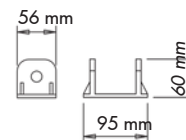

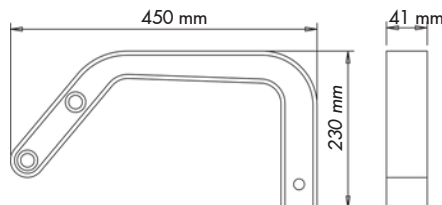

The Boomerang Pull Clamp:

The Stanzani Boomerang is a specialized pull hook set engineered for heavy-duty structural repairs in deep or recessed areas. Its unique curved geometry allows technicians to apply massive force while keeping the chain safely away from the vehicle's exterior panels. Ideal for complex pulls where traditional clamps fail to reach, the Boomerang provides a direct line of tension to the damaged area while eliminating the risk of accidental chain markings on the surrounding sheet metal.

- **6-Ton Pulling Capacity:** Certified for heavy structural alignment and frame work.
- **Accessory Kit Included:** Comes complete with a body hook and a specialized set of adapters for varied attachment points.
- **Body Protection:** The offset design ensures that the pulling chain remains clear of the vehicle's finish, preventing costly rework.
- **Italian Forged Strength:** Manufactured with forged steel for superior longevity and operator safety.
