

## TENAGLIA | PULL PLIER Ref. 144

### The Pull Plier Pull Clamp:

The Stanzani Pull Plier is engineered with a compact profile and a wide-opening jaw, this forged steel tool is specifically designed to reach deep into difficult areas like side sills and inner wheel houses. Despite its nimble size, it doesn't compromise on strength.

Rated for a 4-ton pulling capacity, it features aggressive knurling on its tempered jaws to ensure a non-slip, "bite-like" grip on the sheet metal. It's the essential tool for technicians who need to balance heavy-duty power with surgical precision in tight spots.

Built for the rigors of a high-volume body shop, the Ref. 144 is forged from high-tensile steel for maximum durability. Its design focuses on a "low-profile, high-tension" philosophy, allowing for reliable structural pulls where clearance is minimal.

- **Hardened Tempered Jaws:** The jaws are heat-treated to resist wear and maintain a sharp, biting edge over years of service.
- **Wide Aperture:** The unique hinge design allows for a generous opening, accommodating various metal thicknesses.
- **Certified Strength:** Rigorously tested to withstand 4 tons of pulling force.
- **Compact & Lightweight:** At just 3.2 kg, it is easy to position with one hand, increasing technician efficiency.
