GYS
INVEST IN THE FUTURE

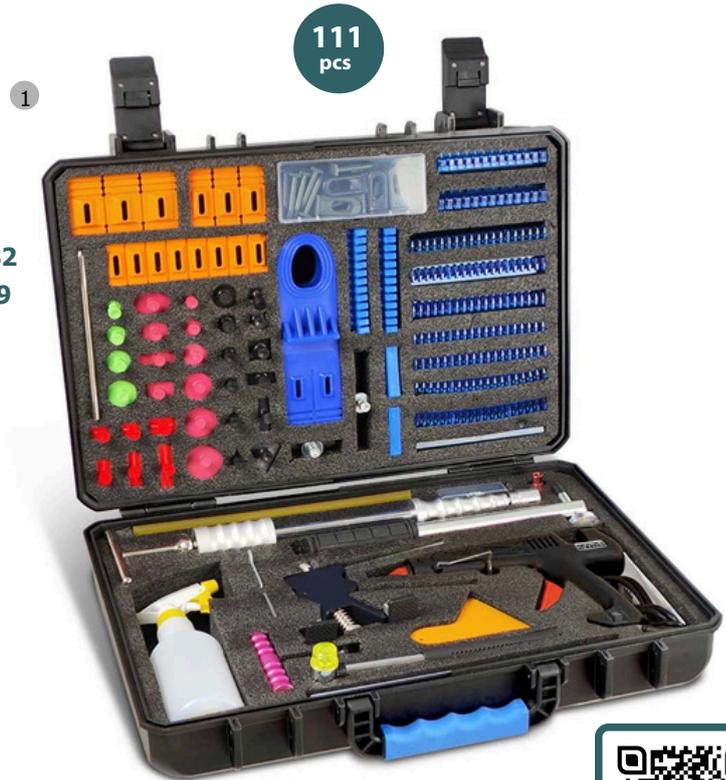

The GYS GPR Adhesive Dent Removal Kit complements conventional straightening techniques for steel and aluminum exterior panels by enabling controlled adhesive pulling without removing trim or exterior covers.

This kit is designed as a practical introduction to glue-based straightening. It includes high-quality adhesive, professional tabs, and essential pulling accessories, providing technicians with the core components needed to begin performing adhesive repairs.

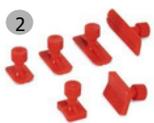

Compatible with most industry-standard pull bars and accessories, the kit integrates easily into existing workflows and allows for future system expansion if desired.

COMPLETE KIT READY FOR USE
