

## Skuba | Ref. 121

Interchangeable  
jaws

### 55 mm Self-Locking Pull Clamp (No Hinge)

The Skuba 55 mm Self-Locking Pull Clamp is engineered for fast, secure attachment without the need to screw onto the body panel. Its self-locking design grips firmly in place, improving efficiency while reducing setup time.

The clamp features interchangeable, knurled jaws made from hardened, wear-resistant steel for long service life and reliable holding power. Instead of a traditional hinge, the two clamp shells are joined by a forged and precision-turned steel ring, delivering superior strength and durability under heavy pulling loads.

At the core of the design is a self-centering locking mechanism, composed of a trapezoidal cone and a spring-loaded threaded pin. This mechanism is continuously held in position by machined seats within the two shells, preventing movement or disengagement during use.

Forged from high-strength steel, the Skuba pull clamp is built for demanding collision-repair and frame-straightening applications where strength, reliability, and speed matter.

#### SKUBA Ref. 121

#### Technical specifications

Raw Material	high-grade steel	
Pull strength	ton	6
Jaws width	mm	55
Weight	Kg	3,2
